This table provides a quick look at the various closures that are currently in progress on the OSU Research Forests. Unless otherwise noted in the table, these closures are in place **24 hours a day, 7 days a week** to allow harvest crews to progress rapidly on the projects. Harvest areas are extremely dangerous for visitors and harvest crews, with hazards from falling trees and large equipment. Information about forest closures is located at key access points, and closures are clearly marked on-site. Thank you for your respect of these safety closures.
