Spring Herbicide Spray,

Spring Herbicide Spray starting as early as Wednesday, April 15, 2020

- Exact start dates dependent on weather conditions and contractor availability.
- All treatment units on McDonald and Dunn Forests will be sprayed using backpack sprayers. Spray targets vegetation only (not road surfaces).
- During application, staff will be positioned at roads and official trails leading into spray areas to keep people away. See signs on-site for re-entry times associated with each chemical.
- Date of application, name of the chemical used, and the industrial re-entry interval will be written on signs posted at entry points into each treatment area. Signs will remain in place for one week.
- The purpose of the herbicide application is to control growth of non-native plant species and competing vegetation in recently reforested areas. This herbicide application will be conducted in compliance with State and Federal regulations and under the supervision of a licensed pesticide applicator.
